SEDOL	BJ34HT9
Domicile	United Kingdom
Use of Income	Accumulation
Base Currency	GBP

All Aegon LifePath Capital funds have an all-inclusive annual management charge. Please call our helpline for details of the annual management charge rate that will apply to your investment.

### Relative Risk Profile

Each Aegon LifePath Capital fund automatically changes its mix of investments over time from higher-risk to lower-risk investments and therefore the risk rating of each fund will vary over time from 5 (Medium-High) at the growth stage to 1 (Very Low) when a member reaches their target retirement age (TRA).

These risk ratings are only applicable to funds available via TargetPlan. Other risk ratings apply across the rest of our fund range and they, or ratings from other providers, are not comparable. Be aware that even lower-risk investments can fall in value.

### Fund objective

The fund aims to provide you with long-term capital growth. It's designed for members who intend to take their pension pot as a cash lump sum after they reach retirement. It automatically adjusts its mix of investments with the aim of reducing risk as members approach their Target Retirement Age (TRA). When members are further from their TRA they will be invested in typically higher-risk investments, such as global equities (company shares). It then gradually moves them into a mix of mainly Sterling denominated short-duration fixed income and cash-like assets as members approach their TRA. It may also invest in other permitted assets. This fund is subject to Aegon's climate commitments.

### Understanding the LifePath asset allocation strategy

LifePath Capital reflects the changes in members' needs through their working life. This chart shows how a member's mix of investments will gradually change as they get nearer to their target retirement age (TRA).

## Fund performance

The following graph and tables show the performance of the fund over various time periods compared to the fund's benchmark (if there is one). All performance information is as at 31 Dec 2025 unless otherwise stated.

In the graph, performance is shown since launch if the fund is less than five years old.

■ Fund  
■ Benchmark

	3 Months	YTD	1yr	3yrs	5yrs
Fund	5.2%	14.9%	14.9%	16.9%	11.1%
Benchmark	3.2%	13.0%	13.0%	16.0%	10.3%

	Dec 20 to Dec 21	Dec 21 to Dec 22	Dec 22 to Dec 23	Dec 23 to Dec 24	Dec 24 to Dec 25
Fund	21.7%	-12.9%	17.4%	18.4%	14.9%
Benchmark	19.8%	-12.7%	16.5%	18.6%	13.0%

During Q3 2025, we made some changes to the fund's mix of investments. As a result, you may see more of a difference between fund performance and benchmark performance. That's normal after a change like this, and we expect the difference to reduce over time.

Source: FE fundinfo. The performance information has been calculated in pounds on a bid-to-bid basis and is net of charges with gross income reinvested. Performance for periods over a year is annualised (% per year). Past performance is not a reliable guide to future performance. The value of an investment can fall as well as rise and is not guaranteed. Investors could get back less than they invested.

Performance shown is gross of the annual management charge but is net of additional expenses (if any) incurred within the fund. Expenses can include costs paid by Aegon to third parties. The annual management charge will reduce the performance figures shown. Source: Scottish Equitable plc.

Differences in performance reporting between fund and benchmark may arise due to the impact of timing, charges, cashflows, and the pricing basis of the underlying fund. Fund returns are calculated on a total return basis with dividends reinvested.

The value of your plan depends directly on a number of things, including the level of your pensions savings, charges, investment returns and the annuity rates available to buy your pension income when you decide to take your benefits. Levels and basis of, and reliefs from, taxation can also change. Any money that you invest in the plan is tied up until you take your retirement benefits. You cannot normally take the benefits until at least the age of 55.

The value of investments can fluctuate. Fluctuations may be particularly marked in the case of a higher volatility fund and the value of an investment may fall suddenly and substantially. Changes in exchange rates will affect the value of overseas investments. Emerging market investments are often associated with greater investment risk. Two main risks related to fixed income investing are interest rate risk and credit risk. Typically, when interest rates rise, there is a corresponding decline in the market value of bonds. Credit risk refers to the possibility that the issuer of the bond will not be able to repay the principal and make interest payments.

If the name of the Fund includes BlackRock, BlackRock may be abbreviated to BLK on some materials such as Annual Benefit Statements.
