Base Currency	GBP

Relative Risk Profile

These risk ratings are only applicable to funds available via TargetPlan. Other risk ratings apply across the rest of our fund range and they, or ratings from other providers, are not comparable. Be aware that even lower risk investments can fall in value.

Fund objective

This fund aims to produce a return in line with its benchmark by investing in the shares of smaller companies from across the globe. Derivatives may also be used for investment and efficient portfolio management purposes. The use of derivatives is expected to be limited. This fund uses a set of exclusionary criteria which removes exposure to certain companies based on Environmental, Social and Governance (ESG) concerns. The exclusionary thresholds and definitions are owned by a third party and subject to change.

Fund performance

The following graph and tables show the performance of the fund over various time periods compared to the fund's benchmark (if there is one). All performance information is as at 31 Dec 2025 unless otherwise stated.

In the graph, performance is shown since launch if the fund is less than five years old.

Fund	-	-	-	9.2%	13.5%
Benchmark	-	-	-	8.9%	12.7%

Source: FE fundinfo. The performance information has been calculated in pounds on a bid-to-bid basis and is net of charges with gross income reinvested. Performance for periods over a year is annualised (% per year). Past performance is not a reliable guide to future performance. The value of an investment can fall as well as rise and is not guaranteed. Investors could get back less than they invested.

Performance shown is gross of the annual management charge but is net of additional expenses (if any) incurred within the fund. Expenses can include costs paid by Aegon to third parties. The annual management charge will reduce the performance figures shown. Source: Scottish Equitable plc.

Aegon Global Small Cap Equity Tracker (AMT)

Differences in performance reporting between fund and benchmark may arise due to the impact of timing, charges, cashflows, and the pricing basis of the underlying fund. Fund returns are calculated on a total return basis with dividends reinvested.

The value of your plan depends directly on a number of things, including the level of your pensions savings, charges, investment returns and the annuity rates available to buy your pension income when you decide to take your benefits. Levels and basis of, and reliefs from, taxation can also change. Any money that you invest in the plan is tied up until you take your retirement benefits. You cannot normally take the benefits until at least the age of 55.

The value of investments can fluctuate. Fluctuations may be particularly marked in the case of a higher volatility fund and the value of an investment may fall suddenly and substantially. Changes in exchange rates will affect the value of overseas investments. Emerging market investments are often associated with greater investment risk. Two main risks related to fixed income investing are interest rate risk and credit risk. Typically, when interest rates rise, there is a corresponding decline in the market value of bonds. Credit risk refers to the possibility that the issuer of the bond will not be able to repay the principal and make interest payments.

If the name of the Fund includes BlackRock, BlackRock may be abbreviated to BLK on some materials such as Annual Benefit Statements.
